### An Impactful Measure

As a health care operator or administrator, you understand that your star rating has never been more important, with patients, physicians, insurers, lenders and investors utilizing it to rate your facility's performance within a local market.

### Real-Time Monitoring of Your Quality Metrics

The **StarNow** tool generates a real-time view of your MDS quality measures indicating negative trends before the information is submitted to CMS.

### Stop Tracking Key Data Manually

**StarNow's** simple dashboard automatically highlights residents who have the potential to negatively impact your facility's overall star rating. This allows you to focus your staff's time and attention on clinically resolving the issues before they affect your rating.

### Being Proactive Instead of Reactive

**StarNow** demystifies the star ratings with a proactive at-a-glance look at the numbers and factors that will sway your star ratings, giving you time to react appropriately.

### Stay On Top of Staffing

**StarNow's** real-time staffing software accepts your time and attendance data and combines it with several other data points (including your case mix) to forecast your CMS RN, Total and Overall Staffing ratings.

### Identify Trends

Monitor your staffing levels and compliance as you progress through each quarter. **StarNow** identifies gaps in staffing data helping to avoid non-compliance with CMS regulations that could result in a penalty of being downgraded to 1 star in Staffing. Any facility that is 1 star in Staffing will lose a star on its Overall CMS 5-Star rating.

### Getting the Credit You Deserve

Your team works hard to ensure quality care. Don't let unanticipated issues negatively affect your ratings. **StarNow** will help your facility consistently get full credit for your planning, monitoring and execution from the start.
